

KARAN KUMAR KHUNTIA

SOC Analyst | Cybersecurity Graduate

☎ +91-7205699428 | ✉ karankumarkhuntia0@gmail.com | www.linkedin.com/in/karan-kumar-khuntia2003

PROFESSIONAL SUMMARY

Cyber Security Analyst (SOC L1) with hands-on experience in SIEM monitoring, log analysis, alert triage, and incident investigation across Linux and Windows environments. Skilled in identifying unauthorized access, analyzing attack patterns, and performing root cause analysis. Experienced in security monitoring using Splunk, Wazuh, and Suricata, with knowledge of Azure Cloud security fundamentals and cloud workload protection concepts. Strong understanding of SOC workflows, SLA adherence, and 24x7 security operations.

TECHNICAL SKILLS

- **SIEM & Monitoring:** Splunk, Log Analysis, Security Event Monitoring, Alert Investigation
- **Network Security:** Wireshark, Snort, Suricata, iptables, TCP/IP, DNS, HTTP, MITM Detection, Network Traffic Analysis
- **Cloud Security:** Azure Fundamentals, Defender for Cloud (Conceptual), Cloud Workload Protection.
- **Operating Systems:** Linux (Ubuntu, Kali Linux), Windows
- **Security Concepts:** Incident Response, Threat Analysis, Vulnerability Assessment, Risk Assessment, Network Monitoring
- **Scripting & Languages:** Python (Basic), PowerShell, C++, SQL

EXPERIENCE

SOC Analyst L1 – Hands-on Lab Experience

- Implemented File Integrity Monitoring (FIM) using Wazuh to detect unauthorized file changes
- Analyzed security alerts generated from host-based and network-based monitoring
- Used Snort IDS to detect suspicious network activity and attack patterns
- Performed basic web application security testing using Burp Suite to identify common vulnerabilities
- Investigated logs and alerts to understand attack behavior and defensive response

PROJECTS

Network Intrusion Detection System (Suricata & Splunk)

- Implemented **Suricata IDS** for deep packet inspection and signature-based network threat detection
- Integrated Suricata alerts with **Splunk Enterprise SIEM** using **Splunk Universal Forwarder** in a multi-VM environment
- Developed and tested **custom Suricata rules** for ICMP, port scanning, and suspicious traffic patterns
- Simulated real-world attacks and validated detections through **Splunk dashboards and SPL queries**

Tools & Tech: Suricata, Splunk Enterprise, Ubuntu Linux, VMware | IDS, SIEM, TCP, ICMP, HTTP, DNS

AI-Driven SOC Monitoring & Threat Detection Platform (Wazuh, Suricata & Python ML)

- Implemented a centralized SOC monitoring platform using Wazuh SIEM to collect and analyze security alerts from Linux, Windows, and network sources
- Integrated Suricata IDS with Wazuh for network-based threat detection including port scanning, brute-force attempts, and suspicious traffic patterns
- Developed a Python-based anomaly detection engine using Isolation Forest to identify abnormal SIEM alerts and reduce false positives
- Simulated real-world cyber attacks and validated detections through Wazuh dashboards and AI-driven alert prioritization

Tools & Tech: Wazuh, Suricata, Python, Scikit-learn, Elastic Stack, Streamlit, Ubuntu Linux, Windows, VMware | SOC, SIEM, IDS, AI/ML, Log Analysis, Anomaly Detection

SOFT SKILLS

- Good Communication Skills
- Teamwork and Collaboration
- Problem-Solving Ability
- Time Management
- Quick Learner
- Responsible and Reliable
- Adaptable to New Technologies
- Ability to Work in Shift Environment
- Attention to Detail
- Positive Attitude

CERTIFICATIONS

Cisco – Introduction to Cybersecurity
EC-Council – Cybersecurity for Business

EDUCATION

MCA (Cybersecurity), Sri Sri University (2024–2026) | CGPA: 9.00
BCA, Utkal University (2021–2024) | CGPA: 8.10
12th Science, Baruneswara HSS (2021) | 76%

SECURITY INTERESTS

- SOC Operations
- Log Analysis and Alert Investigation
- Threat Detection and Behavioral Analysis
- Network Traffic Monitoring
- File Integrity Monitoring (FIM)
- Intrusion Detection Systems (IDS)
- Continuous Security Monitoring
- Blue Team and Defensive Security Practices
